

1. Success Criteria vs Outcomes

Success Criteria	Outcome
Fast access to council information (< 3 seconds)	The agent provides near-instant responses, enabling efficient access to services.
Accessibility (WCAG 2.1 AA)	The UI design follows accessibility principles, using simple language and guided suggestions.
Accuracy ≥ 85%	The system achieved an average accuracy of 85% , indicating strong performance with some areas for improvement.
GDPR compliance	The system uses anonymisation, dummy data, and avoids storing sensitive personal information.
≥70% positive user feedback	The agent demonstrates strong usability through successful handling of a wide range of test queries.

2. Client Requirements vs Implementation

Client Requirement	What We Delivered
Develop a conversational AI agent (LLMs)	Built using OpenAI API + LangChain
Develop using .NET	Fully integrated into a .NET-based system
Integrate with FAQs, databases, and portals	Integrated with FAQs and council web services ; full database integration limited due to privacy constraints

3. Additional Features

Core Enhancements

- Speech-to-text functionality
- UI customisation
- Postcode lookup system

Service Extensions

- School Finder
- Housing support navigation
- Appointment booking system

- Form assistant

Advanced Features

- Council tax/payment calculator
- Context-aware multi-turn conversations

4. Gap/ Limitations

Requirement	Outcome	Gap / Limitation
Database integration	FAQs + web integration achieved	No direct council DB access due to GDPR
Accuracy $\geq 85\%$	Achieved $\sim 85\%$	Some services still weaker
Personalisation	Limited contextual responses	No access to user-specific data
